The information given in this whitepaper is for general understanding purposes only. This whitepaper is for discussion and presentation purposes only. The proposed token "BTCATM" does not guarantee the accuracy of the conclusions reached in this whitepaper.

Nothing in this whitepaper shall be deemed to constitute a prospectus of any sort or a solicitation for investment, nor does it in any way pertain to an offering or a solicitation of an offer to buy any securities in any jurisdiction. This document is not composed by and is not subject to any jurisdiction laws or regulations designed to protect investors.

Certain statement in the whitepaper constitute "forward-looking statement" that are used on the beliefs of the company and reflect their current expectations. Such statements reflect the views of the company at the time the statements are made concerning future events based on information available at that time, and they are subject to risks and uncertainties that could cause actual results to differ materially from those contemplated in those forward-looking statements. The company assumes no obligation to update or revise these statements to reflect current information, events, or circumstances, including changes in any risk or uncertainties that may impact.

In the world of finance there are 2 types of currency

- **Fiat Currency**
- **Crypto Currency**

Fiat currency has almost 100 trillion marketcap and cryptocurrency has 2 trillion marketcap as of 2021.

Cryptocurrency has lot of obstacles to use in daily life because lack of infrastructure and lack of knowledge about network states and blockchain.

As gradually cryptocurrencies will beat fiat currencies in the near future, hence our goal is to provide a payment option where crypto holders can buy goods and services in daily life by using crypto.

There are few challenges in fiat currencies which are neglected but can cause serious threats in future.

1. Centralized control

Almost all fiat currencies are under the control of governments.

Government can print unlimited amounts money which leads to economic bubble and causes economic crisis.

Example:

1. Zimbabwe crisis
2. Venezuela crisis
3. Financial crisis 2007

2. Lack of transparency

Lack of transparency leads to misuse of printed money by government and officials leads to corruption. Unlimited supply is not a quality of sound money.

These are the benefits of using crypto currency over fiat currency

1. Transaction speed

Cryptocurrency transactions is that they can be completed in a matter of minutes. Once the block with your transaction in it is confirmed by the network, it's fully settled and the funds are available to use.

2. Fees

Cryptocurrency transactions are usually less expensive. However, demand on the blockchain can increase transaction costs. Even so, median transaction fees remain lower than wire transfer fee (USA) even on the most congested blockchains.

3. Accessibility

Anyone can use cryptocurrency. All you need is a computer or smartphone and an internet connection. The process of setting up cryptocurrency wallet is extremely fast compared to opening an account at a traditional financial institution. There's no ID verification. There's no background or credit check.

4. Security

Unless someone gains access to the private key for your crypto wallet, they cannot sign transactions or access your funds.

Furthermore, transactions are secured by the nature of the blockchain system and the distributed network of computers verifying transactions. As more computing power is added to the network, it becomes even more secure.

5. Privacy

Since you don't have to register for an account at a financial institution to transact with cryptocurrency, you can maintain a level of privacy. Transactions are pseudonymous, which means you have an identifier on the blockchain that identifies your wallet address but it doesn't include any specific information about the individual.

6. Inflation protection

Many see bitcoin and other cryptocurrencies as offering protection against inflation. Bitcoin has a hard cap on the total number of coins that will ever be minted. So as the growth of the money supply outpaces the growth in Bitcoin.

As we see the number of crypto holders is increasing daily. The crypto transactions have also increased tremendously. There is no crypto payment system to use in day to day life.

Our vision is to provide a crypto payment system where a user can pay directly to anyone anywhere in day to day life.

As the name says BTCATM our main goal is to provide users with user-friendly payment system. We will be installing crypto ATMs for easy exchange of currency. Our ATMs will compete with the current crypto ATMs around the world with best features and lowest transaction fees.

We have created a payment system where user can directly pay to any merchant who is registered with us such as shopkeeper, supermarket, small-scale vendors, big brand stores, etc.

We have a wide range of merchant programs where users can pay with BTCATM token and buy goods and services. The user does not have to rely on fiat currency anymore. Our system calculates within seconds the exchange rate between BTCATM token and fiat currency and pays the vendor directly with the currency he desires.

BTCATM secure wallet provides special QR code to merchants.

01

Help your business go cashless

Cash and card payments are no longer a complete solution for your customers.

Join the crypto revolution and grow your sales by going cashless.

02

Meet your business goals faster

BTCATM can help you reach a wide user-base with targeted campaigns designed to meet your business needs.

03

Enable fast, simple and secure instant payments

Let your customer shop, order and pay hassle-free.

04

Scan n pay

It's swift, effortless and perfect for small businesses.

We provide QR code stickers so that your customer can use to make lightning fast payments. The money is credited to the account of your choice.

05

Blockchain

Blockchain is a shared, immutable ledger for recording transactions, tracking assets and building trust. An asset can be tangible or intangible. Virtually anything of value can be tracked and traded on blockchain network, reducing risks and cutting costs for all involved.

Business runs on information. The faster it's received and the more accurate it is, the better. Blockchain is ideal for delivering that information because it provides immediate, shared and completely transparent immutable ledger.

Key elements of a blockchain

01

Distributed ledger

All network participants have access to the distributed ledger and its immutable record of transactions.

02

Immutable records

No participant can change or tamper with a transaction after it's been recorded to the shared ledger.

03

Smart contracts

To speed transactions, a set of rules - called smart contracts- stored in a blockchain executed automatically.

Ex: BTCATM token is a smart contract that lives in a binance smart chain blockchain.

Phase 1

1. Project research and development.
2. Market Research.
3. Validating the Business model.
4. Creating proprietary smart contract architecture.
5. Stress test smart contracts.
6. Establishing a 5-year plan and vision.
7. Bootstrapping of funds.

Phase 2

1. Website launch.
2. Integration of different wallets with the website.
3. Smart contract security audit.
4. Discussion with ATM service providers.
5. Creating Liquidity pools in DEX.
6. Marketing application for the project.
7. Initial discussion with the high profile investors/Angel investors.
8. Swapping of Tokens with different coins on the website.

Phase 3

1. Listing token in Coinmarketcap and CoinGecko.
2. Allocating funds to the Digital Marketing Team.
3. Creating a Unified Payment Interface (UPI) for the project.
4. Hiring Field Marketing Team for ground-level work.
5. Merchant Program: Creating a Special wallet/ QR code for merchants and vendors in Major cities of Europe and the UAE.
6. Collaboration with ATM service Providers in Major cities of Europe and UAE.
7. Fund raising from High profile/ Angel investors.

Phase 4

1. Finance institutions to help exchange BTCATM token with cash fiat currency.
2. Setting up payment systems like western union.
3. Installation of ATMs in Prominent places in Europe.
4. Adding Token to the lending pool.
5. Listing BTCATM token on the centralized exchanges.
6. Expansion of Merchant Program across Europe and Dubai.
7. Approaching institutional investors for expansion of the Project.

Phase 5

1. Expansion of Merchant program in Asia/ America.
2. Installation of 2nd batch of ATMs in the USA, El Salvador, India, Singapore, and Malaysia.
3. Crypto to cash direct exchange platforms (E.g. Western Union).
4. Creation of New pairs in the exchanges.
